Project Introduction & Motivation

Project Introduction

- A single web platform connecting event planners, vendors, sellers, and customers.

The Problem

- Event planning is fragmented. Dealing with multiple separate vendors leads to communication gaps and messy bookings.

Our Solution

- A unified marketplace where vendors list services and packages, and customers can easily search, compare, book, and buy.

Aim & Objective

Aim

- To build a unified web platform that simplifies event planning, vendor bookings, and product purchasing.

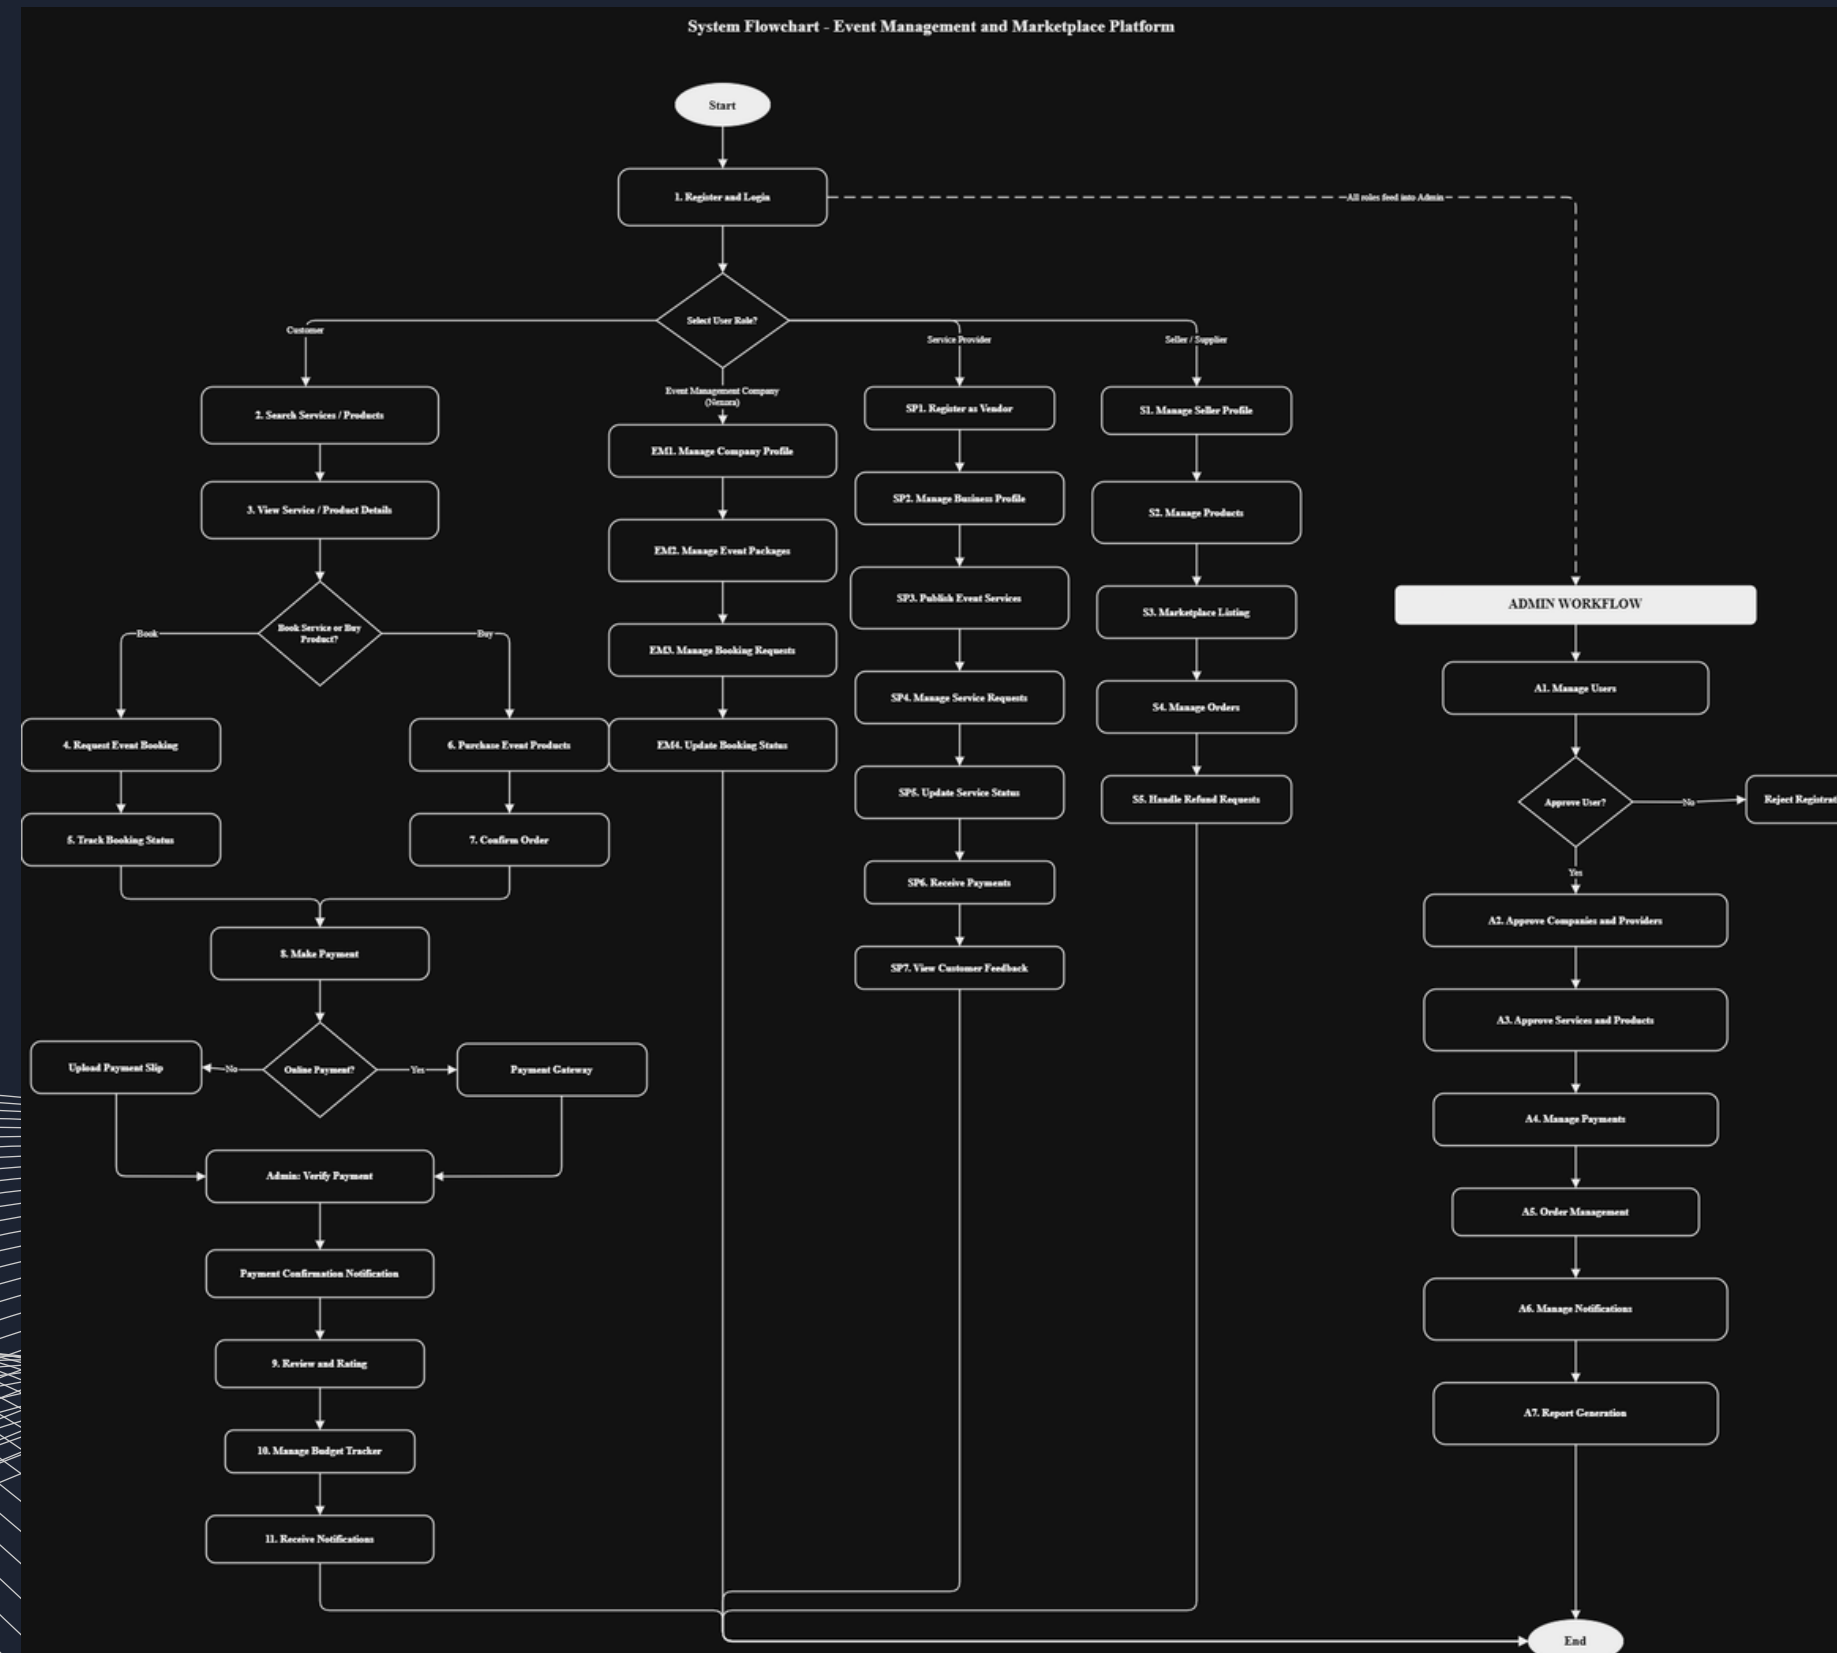

Objectives

- Enable secure registration and business profile management.
- Provide an integrated marketplace for event products and packages.
- Implement seamless booking, order tracking, and admin approvals.

Scope

- In Scope: 4 user roles, search/filter, shopping cart, booking system, reviews, and admin reports.
- Out of Scope: Advanced logistics tracking and multi-currency handling.

Requirements & Technologies

Functional

CORE

Registration, Business Profiles, Service & Package Management.

MARKETPLACE

Product Listings, Search/Filter, Cart, & Order Management.

OPERATIONS

Payments, Reviews, Admin Approvals, & Notifications.

Non-Functional

- **Security:** Secure authentication and strict data privacy.
- **Scalability:** Handles high traffic surges during peak event seasons.
- **Usability:** Intuitive, streamlined, and mobile-responsive interface.

Tech Stack

FRONTEND

React / Vue (HTML5, CSS3, JS)

BACKEND & DB

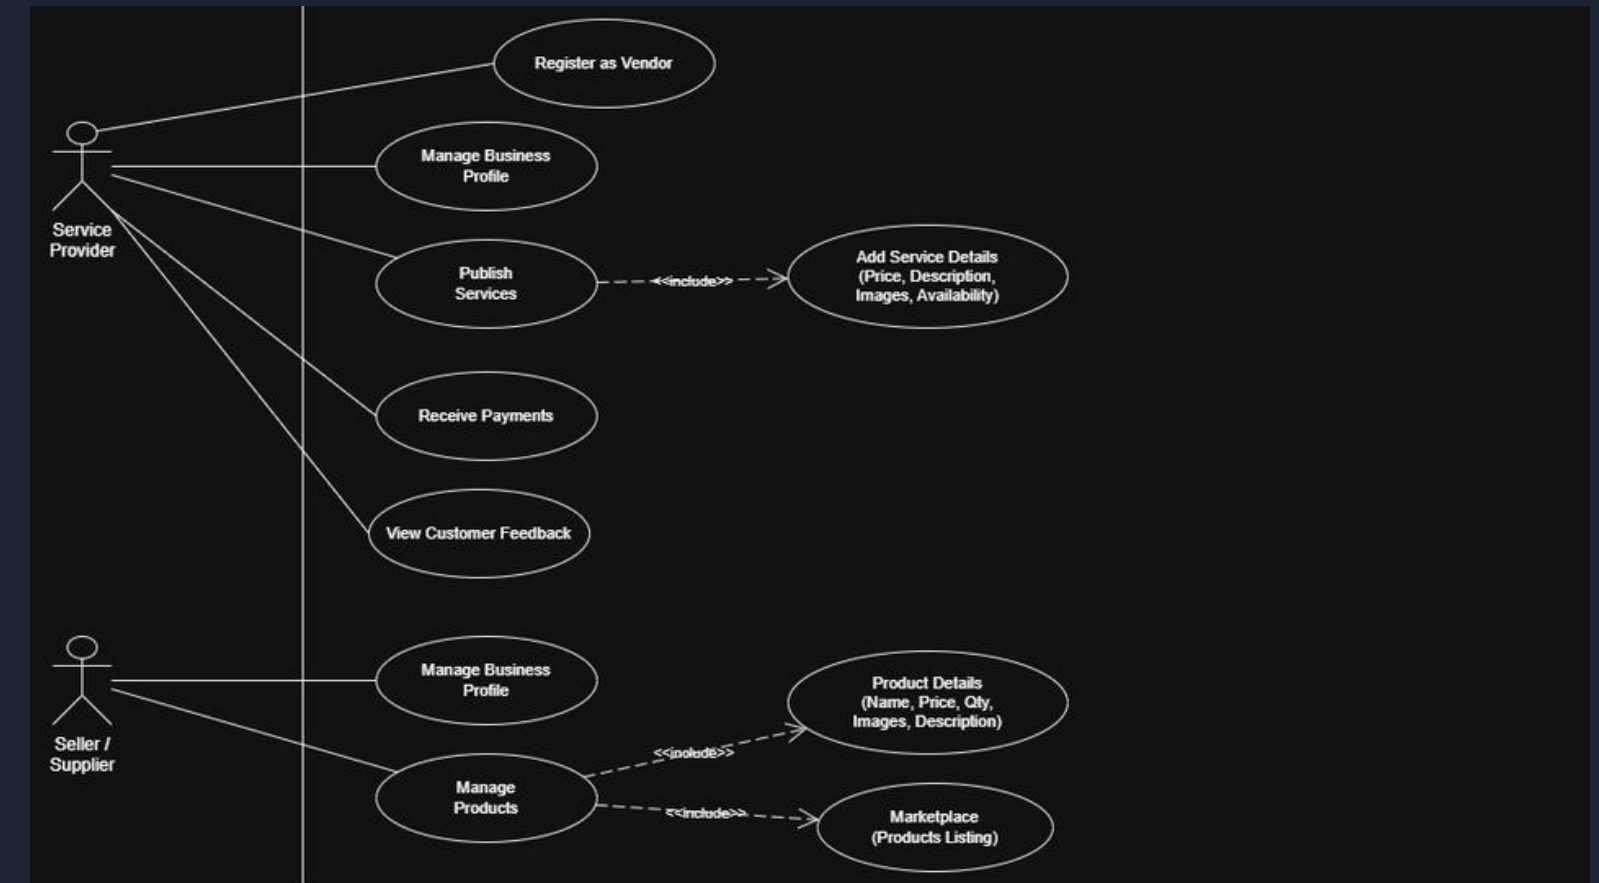

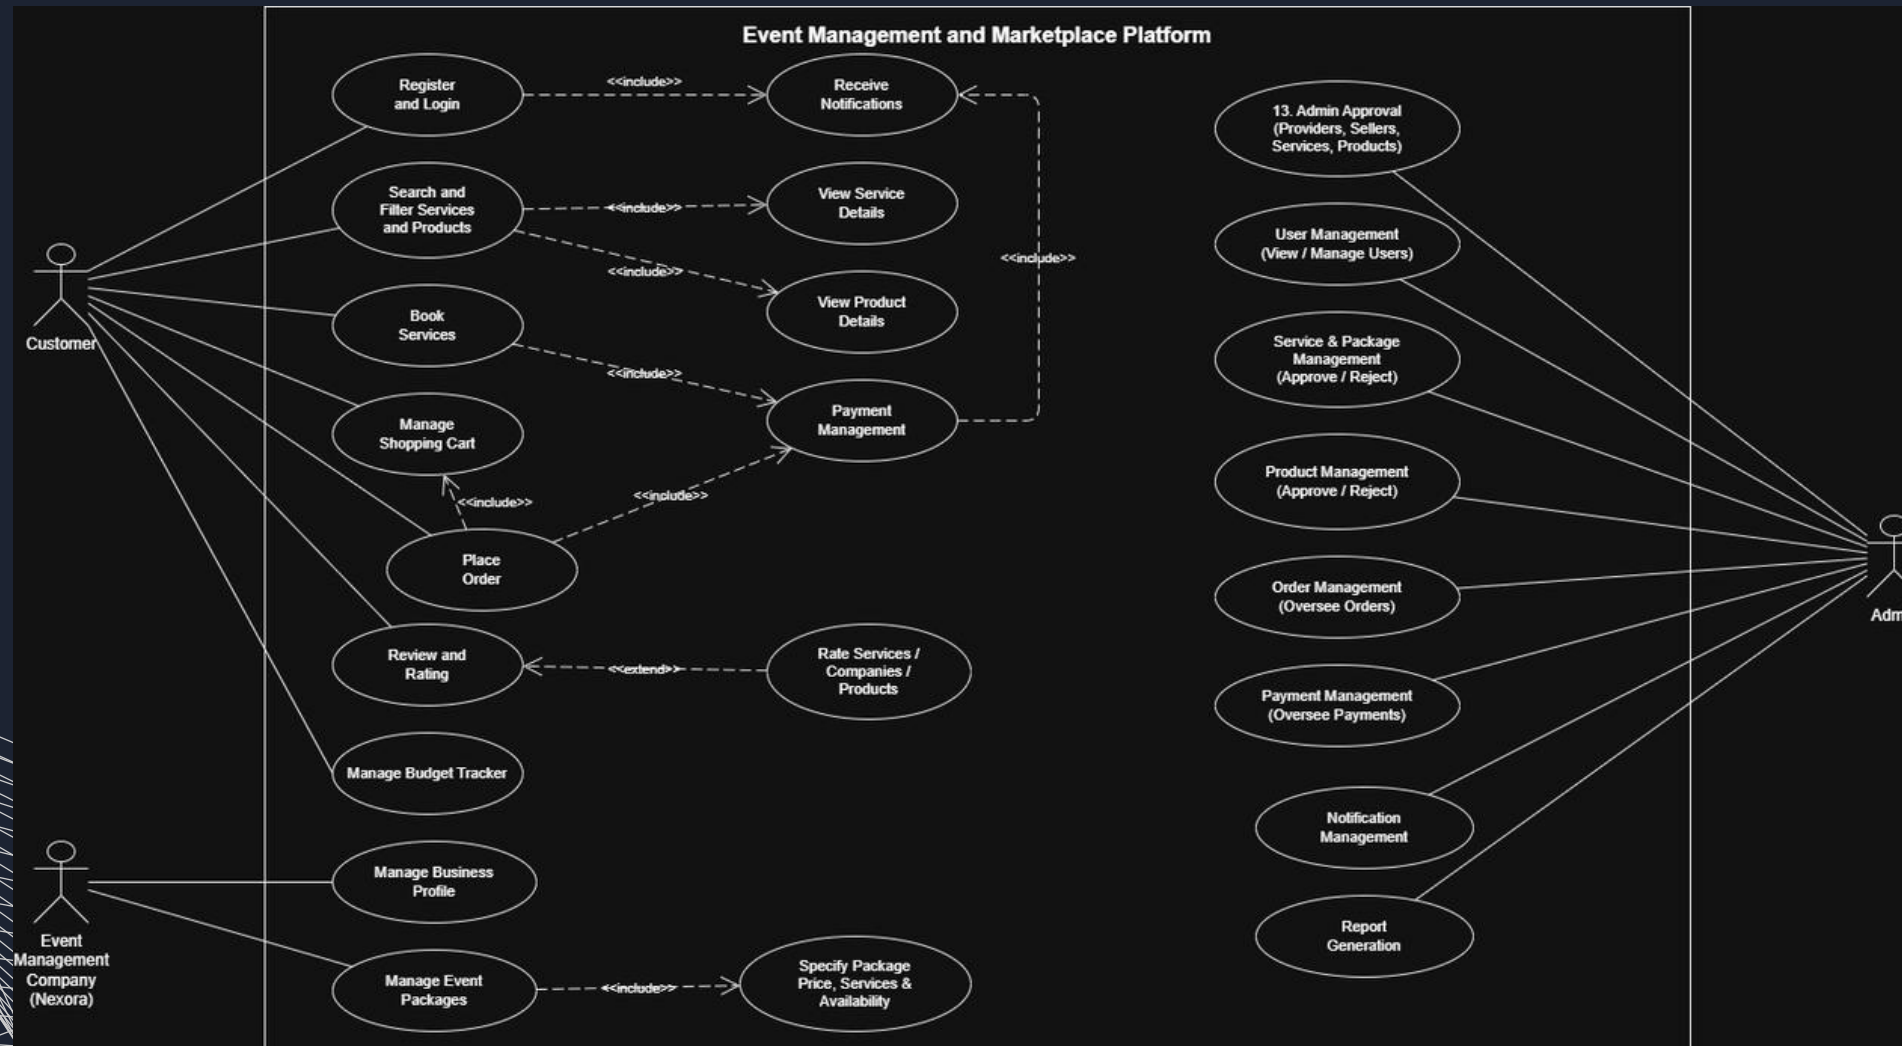

Node.js | PostgreSQL

INTEGRATIONS

Stripe API (Sandbox Payments)

Conclusion & Roadmap

Project Summary

- All-in-One Platform: Connects event planners, service vendors, and product sellers in a single system.
- Better Planning: Fixes communication gaps and simplifies bookings for the Sri Lankan market.

Future Roadmap

- Live Tracking: Real-time delivery and vendor logistics tracking.
- AI Matching: Personalized vendor recommendations based on customer budget and style history.
